

HoloPresenter^{plus}

Complete, flexible, mobile

The **HoloPresenter^{plus}** becomes a basic component of the light and space concept. Lively information areas will be created that structure the room without disturbing its transparency and appearance.

Dynamic information guaranteed to attract attention. The **HoloPresenter^{plus}** is a presentation system with optional controlling software. Its extraordinary design and transparent projection will attract visitors and enable a broad range of applications in zones with a high density of visitors. Videos, animations or combinations of pictures and text will bring information to life. People who are interested will be addressed actively. Contents can be changed dynamically. Interactive elements enable a targeted search for the most attractive offer.

The **HoloPresenter^{plus}** uses the unique **HoloPro™** technology. Whether embedded in glass or fixed to existing glass elements as a foil, **HoloPro™** allows projection onto glass – even in daylight.

HoloPro™

Eye-catching Transparency

The magic of transparency

Floating pictures that communicate information with airy lightness: **HoloPresenter^{plus}** – individual front designs available.

Floating pictures that generate an atmosphere.

The Benefits of **HoloPresenter^{plus}** on a glance:

- Elegant presentation
- Can be combined with **i-ProSTM** touch technology
- Perfect for use at fair stands
- Room-saving
- Easy to assemble

The **HoloPresenter^{plus}** is ideal for the entrance area to provide information to visitors about current events, special offers of the day or special promotions. One particular advantage of the optional **HoloPresenter^{plus}** software is the facility for entering the latest information immediately from the most varied of sources.

Depending on load, offers can be faded out or given special emphasis by means of connection to an existing database system. The **HoloPresenter^{plus}** software can be used as a central control for many advertisements in one object.

The **HoloPresenter^{plus}** consists of a standing glass screen equipped with a **HoloProTM** film in the upper area. The lower area can be used for advertising. The glass screen is supported by an L-shaped element of metal that the projector is mounted on vertically.
