### **Gesture-controlled presentation with HoloPro™**

Atracsys LLC develop interactive systems. On the one hand there is a multifunctional table, the atracTable, and on the other there is an interactive touch-free screen with HoloPro™ - beMerlin.

Atracsys LLC work with your customers to develop ideas on how their products can be presented in a very special, unique way.

This touch-free (gesture-controlled) screen was recently used, to name just one example, at a trade fair in Warsaw..

This project was a complete success. Both the customer and the trade fair visitors were impressed by the way two technical systems complemented each other perfectly. The combination of a HoloPresenter and the beMerlin system meant that the visitors were able to control the presentation simply by moving their hands in front of the screen.

### **New FAQ's**

What you have always wanted to ask... or as a customer service aid. We have reworked the FAQs on our website and hope we will be able to clarify a few more of your queries in this way.

Have a look at [www.holopro.com/FAQ's](http://www.holopro.com/FAQ's)!

We will, of course, still be glad to answer any of your more specific questions - just call us or send us an e-mail! We are also always grateful for any suggestions or other questions. We look forward to your feedback!

### **New data sheet for the new HoloTerminal**

Our new data sheet for the new HoloTerminal is finished at last!
