Press Release

New with HoloPro™: 3 mm technology!

The new HoloPro™ generation, presented as HoloPro™3, is based on highly efficient hexagonal HOEs that are now amazingly small – just 3 mm – and have the same brilliance but even better visibility (especially vertical) and provide a completely even picture.

The individual holograms can no longer be discerned individually from normal viewing distance (!), which means that the picture is completely homogenous. First trial uses at fairs have drawn fascinating reactions from viewers who had previously known HoloPro™ in its brilliant quality – but with “big squares” visible in the picture.

Even the harshest critics will be convinced by HoloPro™3 and the lasting impression it leaves in shop windows, shops, foyers, at fairs or as part of a brilliant presentation...

HoloPro™3 is now available in the usual sizes up to 50". All other sizes will be available from the summer.
